FDD Abstract of [REDACTED]

25X1A

25X1X DIRECTIVE CONCERNING INCREASE OF PRODUCTION OF ELECTROLYTIC CONDENSERS AT EAK PLANT  
IN KOEPELSDORF (4 pp; German/Russian; [REDACTED])

25X1A

[REDACTED] Comment: The Central Administration of the SAG "Kabel" is at 9-11 Bahnhofstrasse in Berlin. The abbreviation "EAK" means Electro-Apparatus Plant in Koeppeledorf. The plant was an enterprise of the AEG (German General Electric Company) until the end of the war. In mid-1946, it came under Soviet ownership, and since then, has been an enterprise of the SAG "Kabel". The abbreviation "AT", used in paragraph 2 of the annex, means AEG Plant in Berlin-Treptow.

This document consists of two typewritten copies, one in German, and the other a carbon copy in Russian, of a two-page order issued in November 1951 by Sobolev, general manager of the SAG (Soviet Corporation) "Kabel", as follows:

Yesakov, general manager of the "Hescho-Kahla" Plant, and Soyadovskiy, general manager of the EAK Plant in Koeppeledorf, were directed to complete preparations for the production of electrolytic condensers during the fourth quarter of 1951, and to increase the productive capacity for condensers to 90,000 per month during the first quarter of 1952. It is stated that this production is required for the television-set production program. Detailed instructions for carrying out the above order were given: a) completion of all installation and construction work for the expansion of the electrolytic production section during the fourth quarter 1951; b) order and purchase of all equipment and machines needed for the expansion of the production section; c) ensuring an output of 90,000 electrolytic condensers monthly by using qualified workers.

Kurenniy, general manager of the AT Plant, was directed to provide the EAK Plant with 3 mercury converters and control-measuring instruments, in accordance with the specifications of the EAK Plant, for equipping the electrolytic production section.

Gulko, chief mechanical engineer of the Abteilung /Department of Division; perhaps refers to SAG "Kabel", was ordered to guarantee the supply of electric power by Power Plant South (40 kilowatts) for the additional production facilities to be put into operation in the EAK Plant.

Tarelkin, chief of the Supply Section of the Abteilung /Department or Division; perhaps refers to SAG "Kabel", was directed to take into consideration the electrolytic-condenser project of the EAK Plant in connection with the compilation of the plant's 1952 materials requirements, so as to guarantee that the requirements for boric acid, aluminum foil, etc. will be met.

Zhinkin, Chief of the PTO (sic), was charged with supervising the execution of all parts of the above order.

Reference is made to appendices containing a list of the electrolytic condensers which will be required for the plants of the SAG "Kabel" in 1952, but there are no enclosures attached to the document.

/The above is a full exploitation of the document./

/Foreign language document or microfilm of it (No. A-7668) is available from CIA library, [REDACTED]
